

# HOW TO CREATE FOLDERS AND MANAGE FILES IN ONEDRIVE

1

On a computer, use your internet browser to visit the website [www.outlook.live.com](http://www.outlook.live.com).

If requested, sign into your Microsoft account.

If working on mobile device, such as a smartphone or tablet, open the OneDrive App.

3

Click on **OneDrive** from the list that appears.

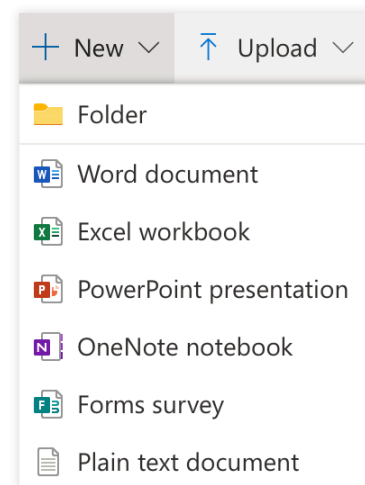

2

Click on the All **Apps** icon located in the upper left corner.

4

Click **+ New** near the upper left corner, then click **Folder**.

Almost there!

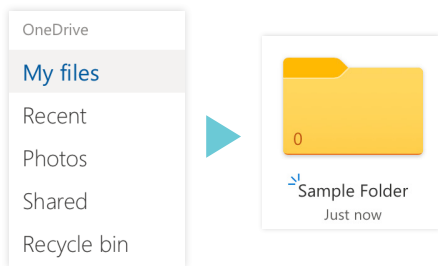

5

Type a **Folder Name** in the space provided. Then click **Create**.

Your newly created Folder will be placed in the **My Files** section of OneDrive.

6

To place files into a Folder: with your mouse hover over the file, when a circle appears in the corner of the file image, click it, to give it a checkmark

7

Click **Move** near the top banner.

8

A new panel may appear, click the desired Folder you wish to move it to, then click **move**.

**Note:**

You can move multiple files into the same Folder at once, by selecting them prior to clicking Move.

*You're all set. Time to share online files and folders with others!*
